

Climate Support Programme Phase IV (CSP4)

Objectives

CSP4 supports the South African government in strengthening the mainstreaming and implementation of its climate and biodiversity policies. It contributes to SA's transition to a decarbonised economy and a climate-resilient society in line with Vision 2050 in a just manner, while also ensuring biodiversity conservation.

Activities

CSP4 is built on three pillars which will contribute to strengthening South Africa's ability for Climate Change policy implementation for NDC ambition:

- Supporting the development and implementation of ambitious climate action as a means to an ambitious NDC.
- Enable contribution to the implementation of climate change and biodiversity actions.
- Support networking and knowledge management for BMU/IKI projects in the country ("interface function").

Impacts

The programme is designed to contribute to South Africa's transformational development pathways and transitions to a decarbonized (net-zero carbon) economy and climate resilient society as per the vision 2050 in a just manner.

CSP4 builds on previous projects and supports the further development of policy legislation and an enabling environment for NDC implementation at national, sub-national and private sector level.

It will act as an interface for BMU/IKI projects in SA and support policy and thematic dialogue as well as exchange between stakeholders in SA and DE, and possibly beyond (e.g. exchange with other emerging economies such as Mexico, Brazil, India etc.).

Project Details

Main Partner:

Department of Forestry, Fisheries and the Environment (DFFE)

Other Project Partner:

National Business Initiative,
South African Institute of
International Affairs (SAIIA)

Implementing Organisation:

Deutsche Gesellschaft für
Internationale Zusammenarbeit (GIZ)
GmbH

Duration:

01.01.2022 - 31.12.2026
